

PIOTR SZARAN

Email: szaranpiotr@gmail.com, GitHub: <https://github.com/iPior>, Website: <https://piotrszaran.com>

Full Stack Developer experienced in building and operating production applications using TypeScript, React, Node.js, REST APIs, relational databases, Docker, and CI/CD, with additional experience in infrastructure and AI-native development.

TECHNICAL SKILLS

Languages & Application Development

- TypeScript, JavaScript, Python, PHP, SQL, PowerShell, HTML/CSS
- React, Astro, Next.js, Node.js, Express, Hono, Tailwind CSS

Backend, Data & Integration

- REST APIs, OAuth 2.0, JWT, MCP
- PostgreSQL, MariaDB, MySQL, SQLite, Prisma, Drizzle ORM

DevOps & Infrastructure

- Git, GitHub, GitHub Actions, Docker, Docker Compose, PM2
- Linux/Debian, Caddy, Cloudflare, Tailscale, CI/CD, Vercel

AI-Native Development Practices

- Context engineering, spec-driven development, prompt engineering, and human-in-the-loop validation
- Custom agents and skills, multi-model workflows

SELECTED ENGINEERING PROJECTS

Pior Labs — Docker Compose · PostgreSQL · OIDC · Caddy · Tailscale · GitHub Actions

- Architected and operate a private, self-hosted platform that gives independently deployed applications shared authentication, networking, data infrastructure, UI conventions, and deployment workflows.
- Created a reusable path for new applications using centralized OIDC, a versioned design system, application templates, database provisioning, and self-hosted CI/CD, reducing repeated setup.

Finlens — React/TypeScript · Hono/Node.js · PostgreSQL/Drizzle · MCP

- Built and deployed a self-hosted household finance tracker that converts bank-statement PDFs into reviewable merchant transactions and spending dashboards.
- Integrated centralized SSO and a read-only MCP server, enabling controlled conversational queries.

Personal Wedding Website — Next.js · Supabase · Resend · Sentry · i18n

- Designed, launched, and operated a guest-management application for more than 200 guests, including custom RSVP, administration, bilingual support and email-broadcasting workflows; deployed on Vercel, monitored with Sentry, and completed the event without reported production issues.
- Used a spec-driven AI workflow to explore 10 design directions and implement the selected experience incrementally through bounded, feature-level tasks.

Selected Client Work

- **Next Level Therapy:** Migrated a clinic website from Squarespace to a code-owned Next.js application, reducing recurring platform costs and integrating Resend, Google Places reviews, and Setmore/Square booking workflows.
- **Council of Support for Polish Studies for the University of Toronto:** Delivered a responsive bilingual platform using Next.js, TypeScript, Sanity CMS, and i18n, enabling client-managed English and Polish content after handover.

WORK EXPERIENCE

Judicial IT Officer

Judicial Information Technology Office, Ministry of the Attorney General, May 2025 – Present

- Provide technical support across Ontario's three courts while owning internal applications from requirements and architecture through deployment and maintenance.
- Built a React and TypeScript hardware order management platform covering purchase-to-return workflows, with role-based access, transactional controls, automated backups, and CI/CD.
- Built a WordPress plugin that replaced a manual Network Access Request process with conditional forms, Microsoft 365 autofill, notifications, searchable records, and audit-ready exports.
- Built and deployed a PowerShell/WPF help-desk application to more than 2,600 computers, replacing a static email template with guided intake, validation, attachments, and automated diagnostics.

Administrative Coordinator with the Business Solutions, Operations & IT Unit

Animal Welfare Services, Ministry of the Solicitor General, January 2023 – May 2025

- Led the rollout of an asset management system (Hector), managing implementation, user acceptance training (UAT), and development of training materials to support adoption. Migrated over 6,000 assets from Excel to the new management platform.
- Developed Python scripts to automate data migration and inventory management, reducing errors and improving team productivity.
- Oversaw the portfolio of over 800 unique IT assets and delivered direct IT support to over 140 frontline inspectors.

EDUCATION

University of Toronto, Honours Bachelor of Science

- Statistics Major, Mathematics and Computer Science Minors
